Building First Azure Resource Manager Template

Abstract and learning objectives

Students will deploy an ARM template via Visual Studio through guided screen shots and instructions. Once the deployment is complete, the student will check on the deployment and ensure there are no errors.

Creating the first resource using Visual Studio

A cloud engineer has several options to start an ARM template. We can get form a new deployment in Microsoft Azure Portal, some templates on the Internet (GitHub), or even from Visual Studio.

Since we are exploring Visual Studio, let's use the tool to create some basic resources to illustrate what we can do using Visual Studio. Right-click on **Resources** located on the JSON Outline tab, and click **Add New Resource**, from the list, select **Virtual Network** and label it. In our case we will use **UCBoxVNET171**, and click OK.

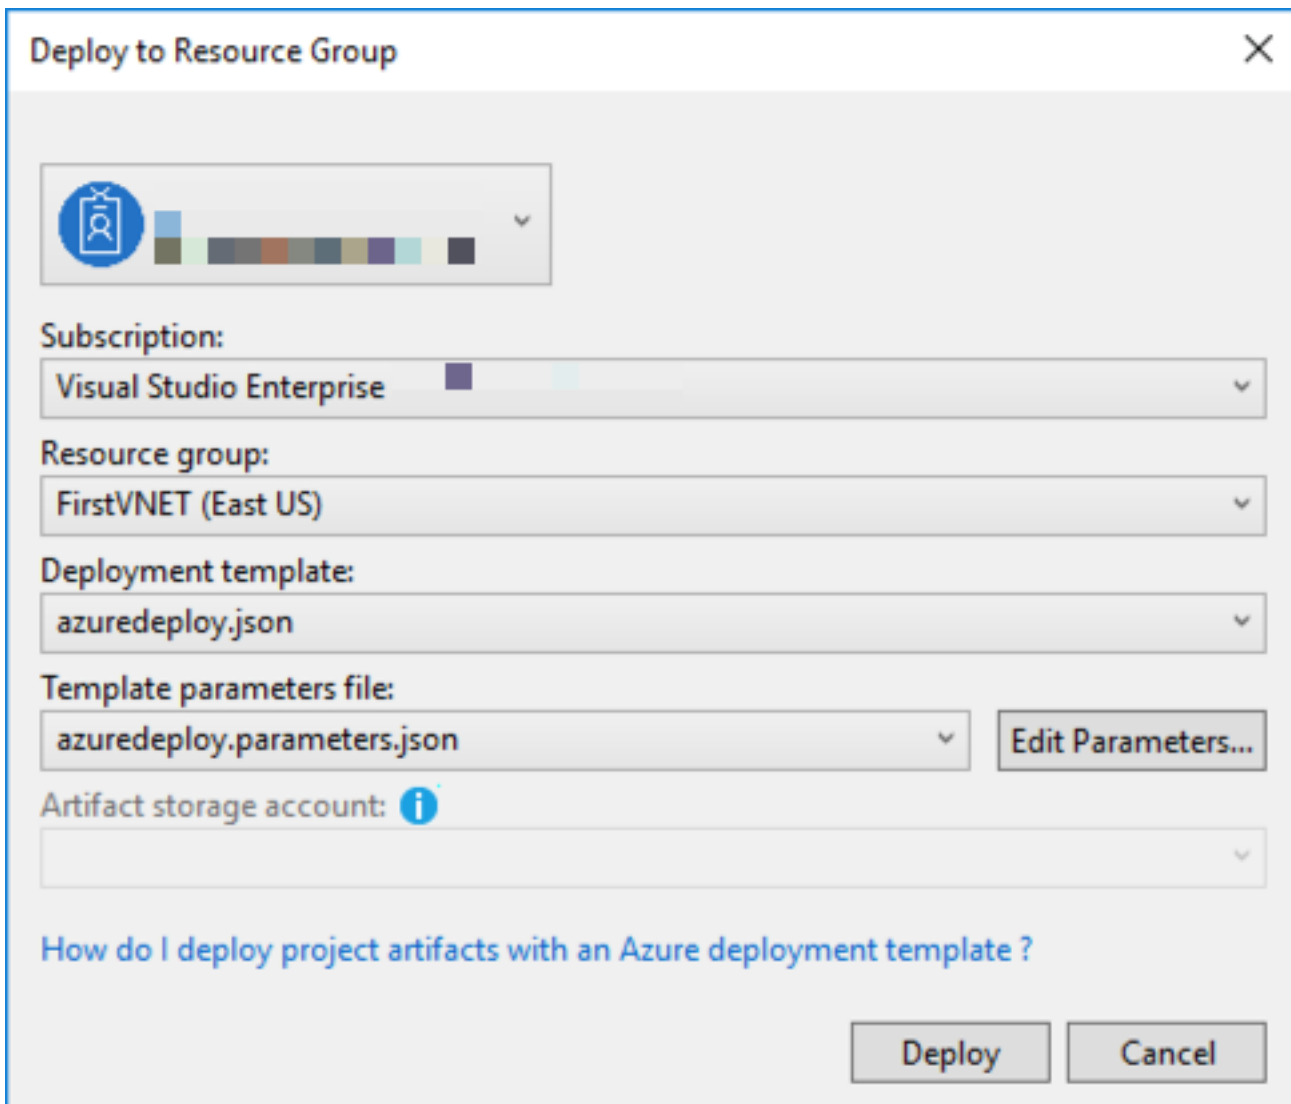

The result of that simple addition will be some code added to the **variables** and **resources** areas of the JSON file. By default, the subnets come with their IP ranges and names. We can change that on the JSON file to fit our environment. Keep in mind that information there is all we need to deploy a Virtual Network in Azure.

A simple way to deploy that JSON file in Azure is to right-click on the Project/Solution, located on the *Solution Explorer* tab, then click on **Deploy, New...**

In the new window, we have to define the subscription, the Resource Group (it can be an existent or create a new one), and define the files (the template, which is azuredeploy.json, and the parameters, which by default is azuredeploy.parameters.json). Click on **Deploy**.

The image shows a 'Deploy to Resource Group' dialog box. At the top, there is a header bar with the title 'Deploy to Resource Group' and a close button (X). Below the header, there is a section with a blue icon of a document with a magnifying glass and a color bar. The main area contains several dropdown menus and a button. The 'Subscription:' dropdown is set to 'Visual Studio Enterprise'. The 'Resource group:' dropdown is set to 'FirstVNET (East US)'. The 'Deployment template:' dropdown is set to 'azuredeploy.json'. The 'Template parameters file:' dropdown is set to 'azuredeploy.parameters.json', and there is an 'Edit Parameters...' button next to it. The 'Artifact storage account:' dropdown is empty, with an information icon (i) to its left. At the bottom, there is a link that says 'How do I deploy project artifacts with an Azure deployment template ?'. At the very bottom, there are two buttons: 'Deploy' and 'Cancel'.

Deploy to Resource Group

Subscription:
Visual Studio Enterprise

Resource group:
FirstVNET (East US)

Deployment template:
azuredeploy.json

Template parameters file:
azuredeploy.parameters.json [Edit Parameters...](#)

Artifact storage account: [i](#)

[How do I deploy project artifacts with an Azure deployment template ?](#)

[Deploy](#) [Cancel](#)

The entire operation will be logged in the *output* area, and we can check the *azuredeploy.json* file was deployed successfully to the Resource Group that we created in the previous step.

Output

Show output from: FirstVNET

20:50:02 -

20:50:02 - DeploymentName : azuredeploy-0326-0049

20:50:02 - CorrelationId : 5be2cf32-f455-4efe-a8eb-f77b745194dc

20:50:02 - ResourceGroupName : FirstVNET

20:50:02 - ProvisioningState : Succeeded

20:50:02 - Timestamp : 3/26/2018 12:49:58 AM

20:50:02 - Mode : Incremental

20:50:02 - TemplateLink :

20:50:02 - TemplateLinkString :

20:50:02 - DeploymentDebugLogLevel :

20:50:02 - Parameters : {}

20:50:02 - ParametersString :

20:50:02 - Outputs : {}

20:50:02 - OutputsString :

20:50:02 -

20:50:03 -

20:50:03 - Successfully deployed template 'azuredeploy.json' to resource group 'FirstVNET'.

Although a *Successfully deployed template* messages bring a lot of confidence, it is always good to check the results on the Azure Portal or using PowerShell. In the image below, we can validate that the Virtual Network (subnets are not being shown here but they were deployed) were created successfully in Microsoft Azure.
