Establishing Network Connectivity in Azure

hands-on lab step-by-step

Abstract and learning objectives

The student will build a series of resources over a few labs that will present a logical network, covering Azure native networking services in Azure. All step-by-step configurations will be done via the portal to build familiarity.

Attendees will be better able to understand all the proper technical terminology surrounding Azure Networking as well as design robust networking in Azure.

Prepared for Arthur J. Gallagher

Exercise 1: Create Virtual Networks & Establish Connectivity Between Regions (VNet-to-VNet VPN Gateway)

Task 1: Create a VNET in the first region with 2 subnets

1. Browse to the Azure portal and login: <https://portal.azure.com/>.
2. In the left pane, click + **Create Resource**.
3. In the **New** blade, select **Networking > Virtual Network**.

4. For the **Create virtual network** settings, enter the following information:
 - a. Name: **AJG-EUS2-VNet1**
 - b. Address space: **10.1.0.0/16**
 - c. Subnet name: **SharedServices**
 - d. Subnet address range: **10.1.1.0/24**
 - e. Subscription: **Choose your subscription**
 - f. Resource group: **AJGNetworking**
 - g. Location: **East US 2**
 - h. Leave **DDoS Protection** at **Basic** and **Service Endpoints** as **Disabled**.
 - i. Click the **Create** button to continue.

Create virtual network

✕

Name

AJG-EUS2-VNet1

Address space

10.1.0.0/16

10.1.0.0 - 10.1.255.255 (65536 addresses)

Subscription

Shannon Visual Studio Enterprise

Resource group

☒ Create new
 ☐ Use existing

AJGNetworking

Location

East US 2

Subnet

Name

SharedServices

Address range

10.1.1.0/24

10.1.1.0 - 10.1.1.255 (256 addresses)

DDoS protection

☒ Basic
 ☐ Standard

Service endpoints

Disabled

Enabled

Create

Automation options

5. Once the deployment is complete, add one more subnet to the VNET. To do this, select the **Subnets** > icon in the **Settings** area.

6. Click the **+ Gateway Subnet** option, and enter the following settings:

☒ Subnet
 ☒ **Gateway subnet**

Search subnets				
NAME	ADDRESS RANGE	AVAILABLE ADDRESSES	SECURITY GROUP	
SharedServices	10.1.1.0/24	251	-	...

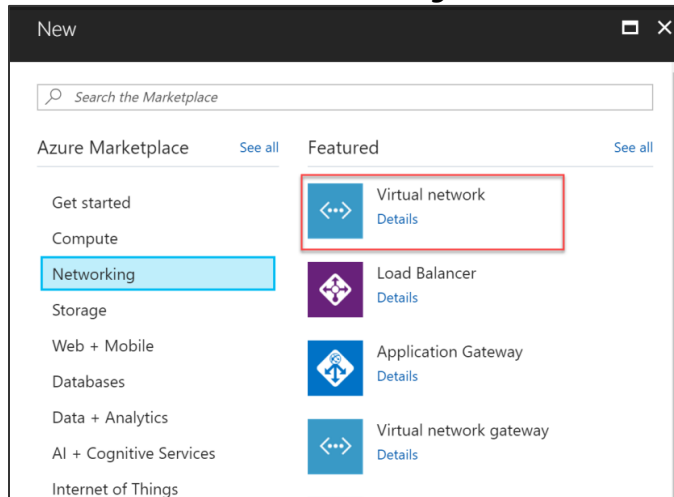

- a. The name (GatewaySubnet) cannot be changed and will be grayed out.

- b. Address range (CIDR block): **10.1.0.0/27**
- c. Leave the Route Table at None and do not configure Service Endpoints.
- d. Click the **OK** button to add this subnet:

The screenshot shows the 'Add subnet' dialog box for the virtual network 'AJG-EUS2-VNet1'. The dialog has a dark blue header with the title 'Add subnet' and a close button. Below the header, there are four sections: 'Name' with the value 'GatewaySubnet', 'Address range (CIDR block)' with the value '10.1.0.0/27' and a green checkmark, 'Route table' with the value 'None', and 'Service endpoints' with the value '0 selected'. At the bottom left, the 'OK' button is highlighted with a red rectangle.

Task 2: Create a VNET in the second region with 2 subnets

1. In the left pane, click + **Create Resource**.
2. In the **New** blade, select **Networking > Virtual Network**.

3. For the **Create virtual network** settings, enter the following information:
 - a. Name: **AJG-WUS2-VNet1**
 - b. Address space: **10.2.0.0/16**
 - c. Subnet name: **SharedServices**
 - d. Subnet address range: **10.2.1.0/24**
 - e. Subscription: **Choose your subscription**
 - f. Resource group: **AJGNetworking (use existing)**
 - g. Location: **West US 2**
 - h. Leave **DDoS Protection** at **Basic** and **Service Endpoints** as **Disabled**.
 - i. Click the **Create** button to continue.

Enabled

Create

Automation options

4. Once the deployment is complete, add one more subnet to the VNET. To do this, select the **Subnets** > icon in the **Settings** area.

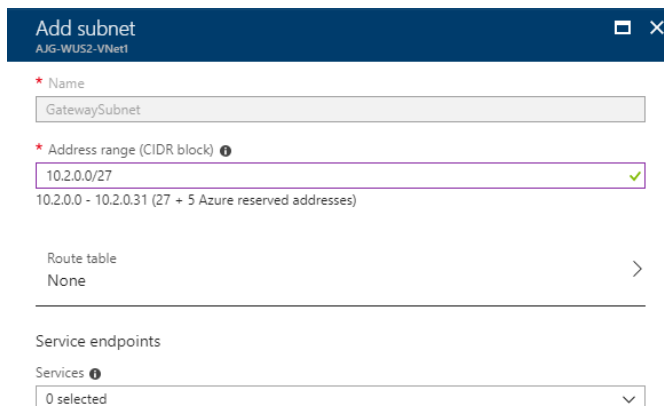

5. Click the **+ Gateway Subnet** option, and enter the following settings:

+ Subnet + Gateway subnet				
Search subnets				
NAME	ADDRESS RANGE	AVAILABLE ADDRESSES	SECURITY GROUP	
SharedServices	10.1.1.0/24	251	-	...

- The name (GatewaySubnet) cannot be changed and will be grayed out.
- Address range (CIDR block): **10.2.0.0/27**

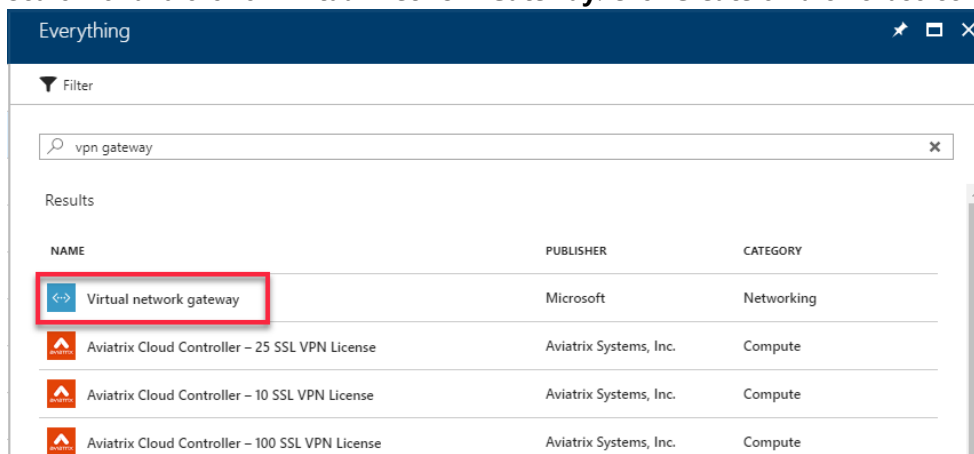

- c. Leave the Route Table at None and do not configure Service Endpoints.
- d. Click the **OK** button to add this subnet:

OK

Task 3: Create a Virtual Network Gateway in first region

1. In the left pane, click + **Create Resource**.
2. Search for and click on **Virtual Network Gateway**. Click **Create** on the next screen

NAME	PUBLISHER	CATEGORY
 Virtual network gateway	Microsoft	Networking
 Aviatrix Cloud Controller – 25 SSL VPN License	Aviatrix Systems, Inc.	Compute
 Aviatrix Cloud Controller – 10 SSL VPN License	Aviatrix Systems, Inc.	Compute
 Aviatrix Cloud Controller – 100 SSL VPN License	Aviatrix Systems, Inc.	Compute

3. For the **Create virtual network gateway** settings, enter the following:

- a. Name: **AJG-EUS2-VPN**
- b. Gateway type: **VPN**
- c. VPN Type: **Route Based**
- d. SKU: **VpnGw1**
- e. Leave **Enable active-active mode** unchecked
- f. Virtual network: **AJG-EUS2-VNet1**
- g. Create new Public IP Address: **AJG-EUS2-VPN-pip**
- h. Leave Configure **BGP ASN** unchecked
- i. Click **Create** (this process will take approximately 40-45 minutes to create)

Create Automation options

Task 4: Create a Virtual Network Gateway in second region

1. In the left pane, click + **Create Resource**.
2. Search for and click on **Virtual Network Gateway**. Click **Create** on the next screen

3. For the **Create virtual network gateway** settings, enter the following:
 - a. Name: **AJG-WUS2-VPN**
 - b. Gateway type: **VPN**
 - c. VPN Type: **Route Based**
 - d. SKU: **VpnGw1**
 - e. Leave **Enable active-active mode** unchecked
 - f. Virtual network: **AJGVNet2**
 - g. Create new Public IP Address: **AJG-WUS-VPN-pip**
 - h. Leave Configure **BGP ASN** unchecked
 - i. Click **Create** (this process will take approximately 40-45 minutes to create)

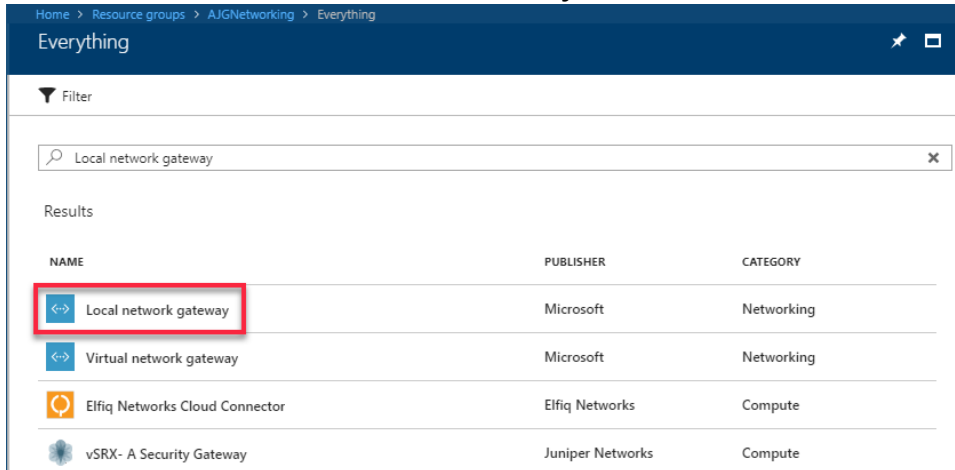

The screenshot shows the 'Create virtual network gateway' form in the Azure portal. The form is filled out with the following values:

- Name:** AJG-WUS2-VPN
- Gateway type:** VPN (selected)
- VPN type:** Route-based (selected)
- SKU:** VpnGw1
- Enable active-active mode:** unchecked
- Virtual network:** AJG-WUS2-VNet1
- Public IP address:** Create new (selected)
- Public IP address name:** AJG-WUS-VPN-pip
- Subscription:** Shannon Visual Studio Enterprise
- Resource group:** AJGNetworking
- Location:** West US 2
- Assignment:** Dynamic (selected)
- Configure BGP ASN:** unchecked

The **Create** button is highlighted with a red box. There is also a link for **Automation options**.

Task 5: Create Local Network Gateways, Connections, and Establish VPN

1. In the left pane, click + **Create Resource**.
2. Search for and click on **Local Network Gateway**. Click **Create** on the next screen.

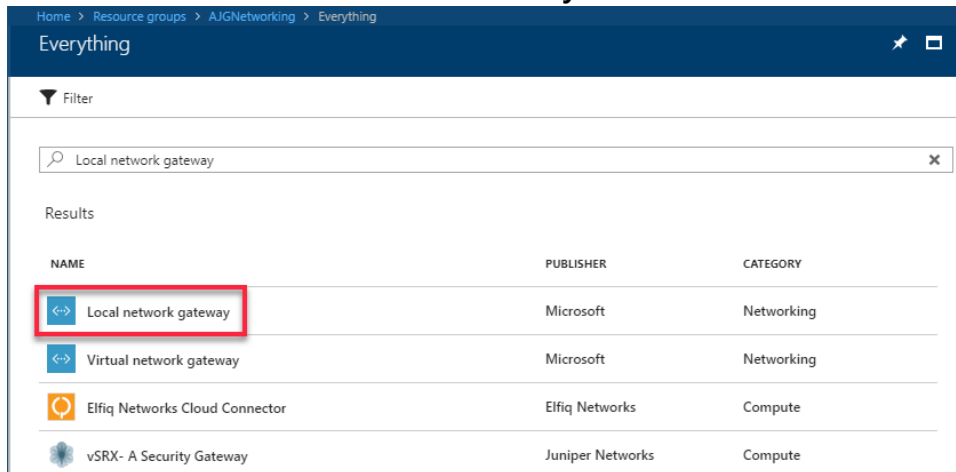

3. For the Create Local Network Gateway settings, enter the following:
 - a. Name: **AJG-EUS2-LGW**
 - b. IP Address: **Use public IP address assigned to VPN during creation**
 - c. Address Space: **10.0.0.0/16**
 - d. Leave Configure BGP settings blank
 - e. Use existing Resource Group
 - f. Location: **East US 2**
 - g. Click Create

The screenshot shows the 'Create local network gateway' form in the Azure portal. The form has the following fields and options:

- Name:** AJG-EUS2-LGW (with a green checkmark)
- IP address:** 104.209.171.234 (with a green checkmark)
- Address space:** 10.1.0.0/16 (with a dropdown arrow)
- Configure BGP settings:** ☐ (unchecked)
- Subscription:** Shannon Visual Studio Enterprise (dropdown)
- Resource group:** ☐ Create new ☒ Use existing (selected)
- Resource group:** AJGNetworking (dropdown)
- Location:** East US 2 (dropdown)

Create Automation options

4. In the left pane, click + **Create Resource**.
5. Search for and click on **Local Network Gateway**. Click **Create** on the next screen.

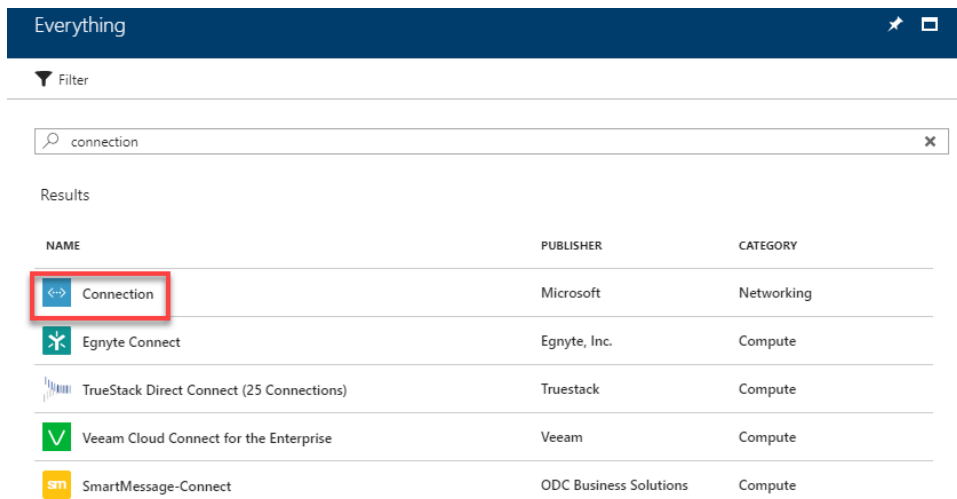

6. For the Create Local Network Gateway settings, enter the following:
 - a. Name: **AJG-WUS2-LGW**
 - b. IP Address: Use public IP address assigned to VPN during creation
 - c. Address Space: **10.2.0.0/16**
 - d. Leave Configure BGP settings blank
 - e. Use existing Resource Group
 - f. Location: West US 2
 - g. Click Create

The screenshot shows the 'Create local network gateway' form in the Azure portal. The form has the following fields and values:

- Name: AJG-WUS2-LGW
- IP address: 157.56.160.222
- Address space: 10.2.0.0/16
- Configure BGP settings: ☐
- Subscription: Shannon Visual Studio Enterprise
- Resource group: Use existing (selected), AJGNetworking
- Location: West US 2

The 'Create' button at the bottom is highlighted with a red box.

7. In the left pane, click + Create Resource.
8. Search for and click on **Connection**. Click Create on the next screen.

9. For the Basics blade, enter the following:
 - a. Connection Type: VNet-to-VNet
 - b. Select subscription
 - c. Use existing Resource Group
 - d. Location: East US 2
 - e. Click OK

The screenshot shows the 'Basics' blade configuration form. It contains five sections, each with a red asterisk indicating a required field. The first section is 'Connection type' with a dropdown menu set to 'VNet-to-VNet'. The second section is 'Subscription' with a dropdown menu set to 'Shannon Visual Studio Enterprise'. The third section is 'Resource group' with radio buttons for 'Create new' and 'Use existing', where 'Use existing' is selected, and a dropdown menu set to 'AJGNetworking'. The fourth section is 'Location' with a dropdown menu set to 'East US 2'.

Exercise 3: Create VMs to Test Connectivity

Task 1: Create Windows VM in AJG-EUS2-VNet1, AJG-EUS2-VNet2, AJG-WUS2-VNet1, and AJG-WUS2-VNet2

1. In the left pane, click + **Create Resource**.
2. In the **New** blade, select **Compute** > Windows Server

3. For the Basics blade, enter the following:
 - a. Name: AJG-EUS2-WINVM1
 - b. Leave VM type on Premium SSD
 - c. Username: ajgadmin
 - d. Password: pick a complex password and input that twice
 - e. Select your subscription
 - f. Use the existing Resource Group
 - g. Location: East US
4. Select D2_V2 (or something comparable size wise)

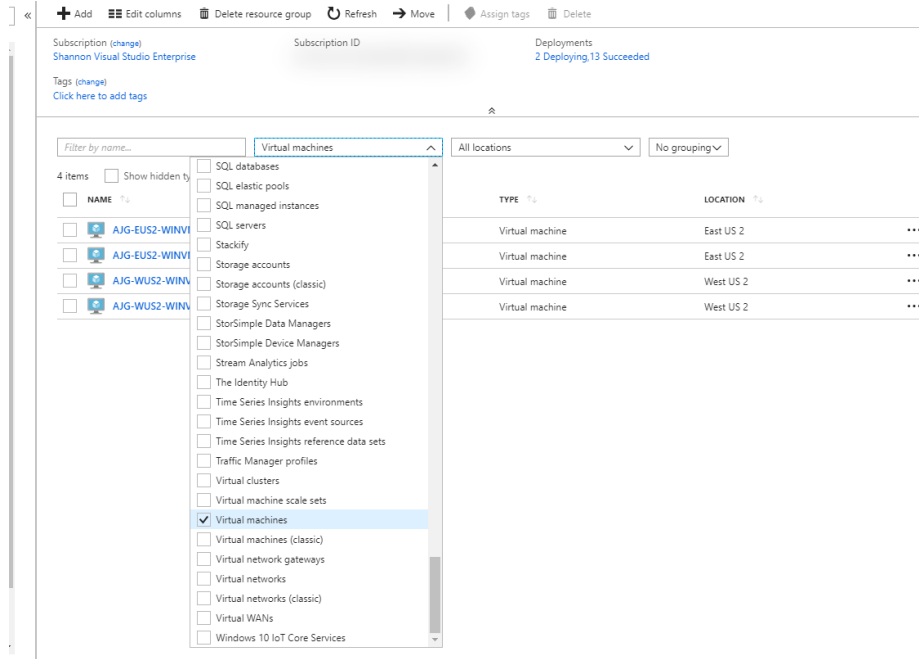

5. For the Settings blade, use the following:
 - a. Leave Availability Set as 'None'
 - b. Use Managed Disks
 - c. Place VM in AJG-EUS2-VNet1
 - d. Use the SharedServices Subnet
 - e. Assign a Public IP address (leave default or change name)
 - f. Click on Advanced for Network Security Group and then click on the public IP. In the new blade, select None to ensure you don't have any Network Security Groups created.
 - g. Do not add extensions
 - h. Turn Auto-Shutdown off
 - i. Disable Boot Diagnostics
 - j. Do not register a managed service identity
 - k. Leave Backup as Disabled
 - l. Click OK to create
 - m. Once validation passes, click Create

The screenshot shows the 'Settings' blade for an Azure virtual machine. The left sidebar contains sections for 'High availability', 'Storage', and 'Network'. The 'Network' section is expanded, showing 'Virtual network' (AJG-EUS2-VNet1), 'Subnet' (SharedServices (10.1.1.0/24)), and 'Public IP address' ((new) AJG-EUS2-WINVM1-ip). The 'Network Security Group' section is highlighted with a red box, showing 'Basic' and 'Advanced' tabs, with 'Advanced' selected. Below this, a 'Network security group (firewall)' is listed as '(new) test-nsg' and is also highlighted with a red box. The right sidebar contains sections for 'Extensions', 'Auto-shutdown', 'Monitoring', 'Managed service identity', and 'Backup'. The 'Auto-shutdown' section is highlighted with a red box, showing 'Enable auto-shutdown' set to 'Off'. The 'Monitoring' section is highlighted with a red box, showing 'Boot diagnostics' set to 'Disabled'. The 'Managed service identity' section is highlighted with a red box, showing 'Register with Azure Active Directory' set to 'No'. The 'Backup' section is highlighted with a red box, showing 'Backup' set to 'Disabled'. The 'OK' button at the bottom right is highlighted with a red box.

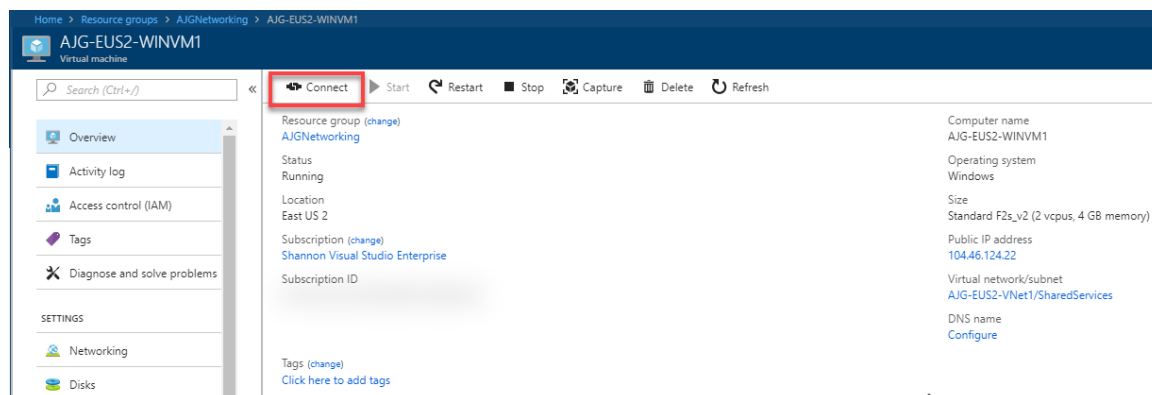

6. Follow the same steps above and create 3 more virtual machines, 1 in AJG-EUS2-VNet2, 1 in AJG-WUS2-VNet1, and 1 in AJG-WUS2-VNet2

Task 2: Log into VMs and Test Connectivity

1. Go into the AJGNetworking Resource Group. By now, you will have several resources deployed to 1 Resource Group. This is by design, as after all tutorials are finished, you will easily be able to delete everything in that resource group with a simple delete Resource Group command issued from the portal.
2. Filter by Virtual Machines at the top of your resource group:

3. Click on AJG-EUS2-WINVM1. Within the Overview blade, click Connect at the top.

4. Click on Download RDP File and then double click on the Remote Desktop file that saves to your machine.

Connect to virtual machine
AJG-EUS2-WINVM1

RDP SSH

To connect to your virtual machine via RDP, select an IP address, optionally change the port number, and download the RDP file.

* IP address
Public IP address (104.46.124.22)

* Port number
3389

Download RDP File

i Inbound traffic to the Public IP address may be blocked. You can update inbound port rules in the **VM Networking** page.

wrench You can troubleshoot VM connection issues by opening the **Diagnose and solve problems** page.

5. Once inside the computer, open up Windows PowerShell and issue out the following command:
`New-NetFirewallRule -DisplayName "Allow ICMPv4-In" -Protocol ICMPv4`
6. Go back to the portal and complete the same steps above for AJG-EUS2-WINVM2, AJG-WUS2-WINVM1, and AJG-WUS2-WINVM2.
7. From each PowerShell prompt, try pinging the internal IP address for the VMs you just created. Remember to ping over the S2S VPN and by each VNet Peer (regional and global). ICMP is turned off by default with Azure VMs, so creating the firewall rule above allows ICMP traffic.
8. At the end of this lab, go into AJGNetworking and delete the resource group by clicking Delete resource group at the top and entering the name of the resource group:

+ Add Edit columns Delete resource group Refresh Move Assign tags Delete
